Kevin Kim June 2, 2020

Forward-Looking Statements

We caution the reader that our estimates of trends, market share, retail consumption of our products and reasons for changes in such consumption are based solely on limited data available us and our management's reasonable assumptions about market conditions, and consequently may be inaccurate or may not reflect significant segments of the retail market. We also caution the reader that undue reliance should not be placed on any forward-looking statements, which speak only as of the date of this release. We undertake no duty or responsibility to update any of these forward-looking statements to reflect events or circumstances after the date of this document or to reflect actual outcomes.

Spectrur

Reconciliation of Non-GAAP Financial Measurements

Management believes that organic net sales provide for a more complete understanding of underlying business trends of regional and segment performance by excluding the impact of currency exchange fluctuations and the impact of acquisitions (when applicable) when there is no comparable sales in the prior period. Organic growth is calculated by comparing organic net sales to net sales in the prior year. The effect of changes in currency exchange rates is determined by translating the period's net sales using the currency exchange rates that were in effect during the prior comparative period. Management uses adjusted diluted EPS as a useful measure for providing further insight into our operating performance because it eliminates the effects of certain items that are not comparable from one period to the next. An income tax adjustment is included in adjusted diluted EPS to exclude the impact of the valuation allowance against deferred taxes and other tax-related items in order to reflect a normalized ongoing effective tax rate of 25%. Adjusted EBITDA is a metric used by management to evaluate segment performance and frequently used by the financial community which provides insight into an organization's operating trends and facilitates comparisons between peer companies, because interest, taxes, depreciation and amortization can differ greatly between organizations as a result of differing capital structures and tax strategies. Adjusted EBITDA can also be a useful measure for determining Spectrum Brands' debt covenant compliance. Adjusted EBITDA excludes certain items that are unusual in nature or not comparable from period to period. Adjusted EBITDA margin reflects adjusted EBITDA as a percentage of net sales.

Spectrum Brands provides this information to investors to assist in comparisons of past, present and future operating results and to assist in highlighting the results of on-going operations. While Spectrum Brands' management believes that non-GAAP measurements are useful supplemental information, such adjusted results are not intended to replace the Spectrum Brands' GAAP financial results and should be read in conjunction with those GAAP results. Supplemental tables have been provided within this presentation to demonstrate reconciliation of non-GAAP measurements discussed in the most relevant GAAP financial measurements.

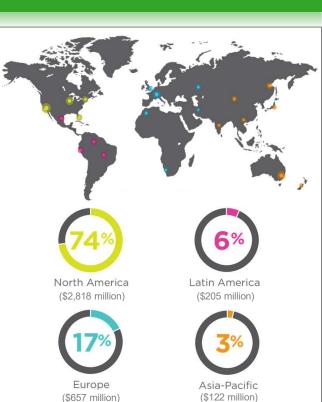

All GAAP reconciliations are available at www.spectrumbrands.com
